

Recitation # 3: Volume by Slicing

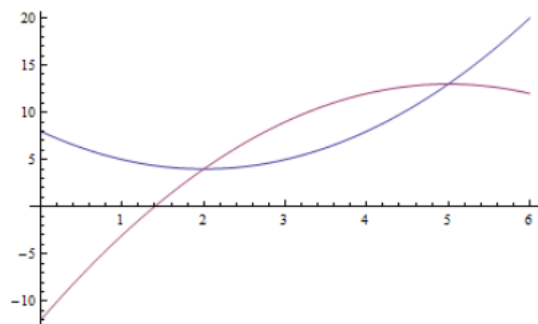

Group work:

Problem 1 (a) Consider the region bounded by the curves $y = x^2 + 8$ and $y = 7x - 2$. Set up an integral that will compute the volume of the solid whose base is the region and whose cross sections perpendicular to the region and the x -axis are:

- (i) Squares
- (ii) Semicircles

(b) Do the same as in (a), except that the solid's cross-sections are perpendicular to the region and the y -axis.

Problem 2 Set up an integral that will find the volume of the solid formed by revolving the region bounded by the curves $y = x^2 - 4x + 8$ (i.e. $x = 2 \pm \sqrt{y - 4}$) and $y = -x^2 + 10x - 12$ (i.e. $x = 5 \pm \sqrt{13 - y}$) about:

- (a) the x -axis
- (b) $y = -3$
- (c) $y = 15$
- (d) $x = 1$
- (e) $x = 6$
